

ankurp187@gmail.com

Almere, Netherlands

+31-657164443

Skills

Programming Languages:

C++, Python, Javascript, Unix

Azure Stack:

Azure Data Factory, Azure Databricks, ADLS

DevOPS Tools:

Github, Gitlab, Azure DevOps

Databases:

SQL, NoSQL (MongoDB)

Additional Skills:

- Data Structure and Algorithms
- PySpark
- Apache Airflow
- Docker

Certifications

DP-203 (Azure Data Engineer)

Databricks Data Engineer Associate

Education

2016-2020

B. Tech, Computer Engineering

Guru Gobind Singh Indraprastha University

CGPA: 8.3/10

2013-2015

Senior Secondary

Govt. Sarvodaya Co-Ed Vidyalaya

Percentage: 89.8%

Ankur Kumar Pandey

Data Engineer

Professional Summary

Data Engineer with 5+ years of experience designing, building, and optimizing enterprise-grade data pipelines using **Microsoft Azure**, including **Azure Data Factory**, **Azure Databricks**, **Azure Data Lake Storage Gen2**, **Azure DevOps**, **PySpark**, **Python**, and **SQL**. Experienced in developing scalable, metadata-driven **ETL/ELT solutions** and analyzing data from **CSV**, **Parquet**, and **SQL databases**. Skilled in **data cleaning**, **transformation**, **exploratory data analysis (EDA)**, **data validation**, **data quality analysis**, and **identifying data inconsistencies and anomalies**, with proven ability to translate complex business requirements into reliable data solutions.

Experience

May 2023 - Present

Data Engineer @ Infosys (Amsterdam)

- Designed and implemented scalable data integration solutions using Azure Data Factory, Azure Databricks, ADLS Gen2, and Azure SQL Data Warehouse.
- Developed and maintained metadata-driven ETL/ELT frameworks to extract, transform, and load data from diverse sources into ADLS Gen2 and Azure SQL Data Warehouse, supporting multiple loading functionalities.
- Leveraged Azure Databricks for large-scale data processing, analysis, and performance optimization, improving resource utilization and pipeline efficiency.
- Performed data analysis, cleaning, transformation, validation, and data quality checks using PySpark, and SQL, identifying inconsistencies, missing values, duplicates, and anomalies across datasets.
- Analyzed structured and semi-structured data from CSV, Parquet, and SQL databases using SQL and Python to identify trends, patterns, and data issues and validate business requirements.
- Built a reusable data anonymization and test-data generation framework to support secure testing and development.
- Developed a metadata-driven framework to model source tables, generate files in multiple formats, and deliver data to third parties for Transaction Monitoring.
- Automated sequential file delivery using REST APIs, reducing manual effort by approximately **0.5 FTE**.
- Developed Azure DevOps CI/CD pipelines for SQL code deployment and used ARM templates for Azure resource provisioning.
- Contributed to Netezza-to-Azure data migration, including data validation and reconciliation activities.
- Created Power BI reports for monitoring pipeline logs, source-data dependencies, and operational status.
- Collaborated with stakeholders and cross-functional teams to gather requirements, translate them into technical specifications, and deliver data solutions; led a team of 3 engineers.

June 2021 - April 2023

NoSQL Database Administrator @ Infosys

- Both development and administration level knowledge for MongoDB.
- Bash Scripting. MongoDB with Node JS for backend.
- Designed monitoring and health-check frameworks for MongoDB environments using Python based automation.
- Optimized database performance through indexing, query analysis, and capacity planning.
- Implemented secure data management practices including SSL/TLS configuration, backup strategies, and disaster recovery procedures.

Feb 2021 - May 2021

Big Data Developer @ Infosys

- Worked on cleaning and processing of data using several Big Data Technologies
- Worked with Pig, Hive, SparkSQL for big data processing.
- Worked with MongoDB queries to clean, transform and load data in Database.

Jan 2020 - April 2020

Backend Developer Intern @ Crio Do

- Worked on CrioDo applications like QBox, QMoney and QPrep.
- Problem Solving using Java
- Worked on Linux Commands, OS and Networking concepts, Java, Rest API, Interfaces, Gradle and DSA. <https://criodo.github.io/Crio-Launch-Feb-2020-ankurp187/>

Projects

- ETL with Apache Airflow (Using Docker) and PostgreSQL
(https://github.com/ankurp187/ETL_with_Airflow)
 - Built a metadata-driven ETL pipeline using Apache Airflow and PostgreSQL to automate daily ingestion and processing of customer, account, and transaction data.
 - Implemented Bronze-Silver-Gold architecture with SCD Type 2 historization, hash-based change detection, idempotent processing, and reusable Airflow DAGs.
 - Used TaskFlow API, Dynamic Task Mapping, cross-DAG orchestration, parameterization, error handling, and logging to build scalable and maintainable data pipelines.
- ETL with dbt and Databricks
(https://github.com/ankurp187/dbt_medallion_architecture)
 - Developed a Medallion Architecture (Bronze, Silver, Gold) using dbt and Databricks to organize data ingestion, transformation, and analytics-ready datasets.
 - Implemented dbt models, seeds, snapshots, and build workflows to support structured data transformations and maintainable analytics pipelines.
 - Used dbt testing, incremental transformation patterns, and environment-aware builds to improve data quality, reproducibility, and deployment readiness.
